

OPNSense: Dual Wan

Le port forwarding ne marche plus sur la gateway de secours

Activer l'option ci-dessous si lorsque le premier lien tombe, le port forwarding ne marche plus.

The screenshot shows the OPNSense configuration interface. A notification at the top states "The changes have been applied successfully." The left sidebar contains a navigation menu with categories like System, Settings, and Diagnostics. The main content area is divided into sections: System, Trust, and Networking. In the Networking section, the "Gateway switching" option is checked, and the "Allow default gateway switching" checkbox is highlighted with a red box. Other options include "Prefer IPv4 over IPv6" (checked), "DNS server options" (unchecked), and "Do not use the local DNS service as a nameserver for this system" (checked). A "Save" button is located at the bottom of the configuration area.
