

# Samba: Second controlleur de domaine

```
apt-get install samba winbind libnss-winbind krb5-user smbclient ldb-tools
```

```
nano /etc/krb5.conf
```

```
[libdefaults]
```

```
default_realm = MYDOMAIN.LAN
dns_lookup_realm = false
dns_lookup_kdc = true
```

```
[realms]
```

```
MYDOMAIN.LAN = {
kdc = 127.0.0.1
kdc = 192.168.1.12
}
```

```
kinit administrator
```

```
rm /etc/samba/smb.conf
```

```
samba-tool domain join mydomain.lan RODC -U MYDOMAIN\Administrator ou dans le cas d'un autre
domain controlleur samba-tool domain join mydomain.lan DC -U"MYDOMAIN\administrator"
```

```
nano /etc/samba/smb.conf dns forwarder = 8.8.8.8
```

```
systemctl disable systemd-resolved
```
