

Correction du problème GLPI/ESET

Faire une policy qui désactive le check pour l'adresse IP du serveur FusiInventory

ESET Endpoint for Windows

The screenshot shows the ESET Endpoint for Windows interface. On the left is a navigation menu with categories: DETECTION ENGINE (8), UPDATE, NETWORK PROTECTION, WEB AND EMAIL (1), DEVICE CONTROL, TOOLS, USER INTERFACE (4), and OVERRIDE MODE. The 'WEB AND EMAIL' section is expanded, showing sub-options: Email client protection, Web access protection, Anti-Phishing protection, Web control, and Secure Browser. The main panel displays the 'PROTOCOL FILTERING' settings. The 'Enable application protocol content filtering' toggle is turned on. Below it, there are three rows for 'Excluded applications', 'Excluded IP addresses', and 'Web and email clients'. The 'Excluded IP addresses' row has an 'Edit' button and two 'Replace' buttons. The 'Web and email clients' row has a 'Vista (no SP)' icon and an 'Edit' button. At the bottom of the main panel is the 'SSL/TLS' section, which is currently collapsed.
