

DISM /image:C:\ /add-driver /driver:G:\ /recurse (C is my OS partition and G is the DVD drive.)

---

AFTER MANY HOURS OF RESEARCHING THIS..... THESE STEPS RESOLVED MY ISSUE!! LEAVE THEM AS 0.

1.Boot OS DVD 2.Choose the Language Selection. 3.Choose Repair. 4.On the recovery tools choose the Command Line Console 5.Type:regedit 7.Highlight HKEY\_LOCAL\_MACHINE 8.File > Load Hive 9.Select \Windows\System32\config\system (Backup this first, it's advised) 10.Regedit will ask for a Key name: Name it something like « temp » 11.Located HKEY\_LOCAL\_MACHINE/temp/Select/Current 12.Searched for every key containing the value "SCSI Miniport" where the « Start » value was a « 3 » and changed the « Start » value to a « 0 ». (F3 to search next result). 13.Highlight « temp » 14.File > Unload Hive 15.Restart 16.Enter into your OS
